

Conditional cost-neutrality ceilings: not clinical adoption thresholds

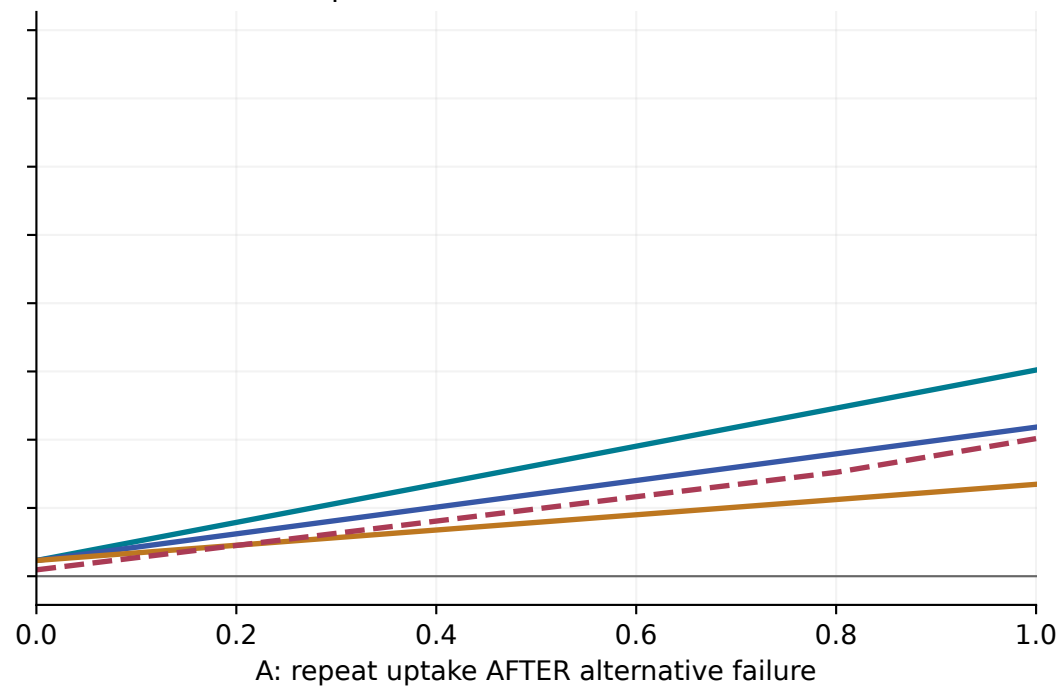

A. Required-report scenario

Entirely hypothetical: $p=0.60$, $r=0.80$

B. Suitability-based illustration

Full translation to report benefit ASSUMED

All costs hypothetical. No price year. Negative values: even a free add-on does not offset modeled rescue differences. Panel B is an explicit unvalidated bridge, not an observed report-completion effect. All rescue occurs within horizon.
